Weekly Wire

Investors Intrigued by AI

By Rusty Vanneman, CMT, CFA, BFA™

Some say when it comes to understanding market returns, “[bonds are math](#)” while “[stocks are stories](#).” This past week provided some confirmation of those notions. First, it should be noted that while the financial media headlines have been dominated of late about the debt deal and its potential [resolution this past weekend](#), the markets really haven’t been all that bothered about it, particularly knowing how politics and markets typically play out during the third year of the [Presidential Election Cycle](#).

A bigger story for the stock market, however, was the continuing investor interest in artificial intelligence (AI). For example, an already large-cap growth stock [NVIDIA](#)s (which builds hardware for AI), stock price exploded higher last Thursday on [better-than-expected earnings](#). That one-day gain in NVDA’s market cap was bigger than the entire market caps of companies like Disney, Nike, and Netflix! The economic [promise of AI](#) is exciting, but [is this a bubble in the making](#)? Investors should consider that NVDA valuations are now higher than they were for well-known (and still surviving) stocks back in the dot.com era. Some of those stocks are still below their late ‘90s price highs.

In other news, inflation just won’t go away. Last week [one measure from the Dallas Fed](#) even hit a new cycle high. It looks more and more like inflation might be stuck at [4-6%](#) for the time being instead of the 2%+ many were hoping/expecting. Higher inflation means higher interest rates. And note that the [CME FedWatch Tool](#) had been expecting just a few weeks ago an 80% chance the Fed would indeed pause on short-term interest rates at their next meeting on June 14th. Given the latest inflation data though, those odds shifted last week to a now 60%+ chance of a 25-basis increase in the Fed Funds rates to 5.50%.

Bottom line, the stock market is off to a nice start this year and there are reasons for that to continue. There are also headwinds such as high valuations and rising interest rates to be mindful of.

Stay invested. Stay diversified. Stay disciplined.

Brinker Capital Market Barometer

The balancing act for markets continued in April as participants continue to weigh the probability of an economic slowdown versus a recession. Despite the variety of headlines and risks, both equity and fixed income markets eked out small gains during the month. Inflation continues to moderate, and the consensus expectation is that the Federal Reserve will pause rate hikes after the additional 25 bp increase at the beginning of May. Despite the additional hike, the market is calling a bluff on the Fed's hawkish rhetoric as the 2-Year Treasury has continued to rally leading to a widening gap between the fed funds rate and two-year yield. The banking sector continues to be in focus as First Republic Bank was taken into receivership by the FDIC and ultimately purchased by JPMorgan. The big banks continue to get bigger, but for now additional financial stress on the regional banks appears to have subsided. The labor market remains robust as payrolls continue to come in above expectations. Actual payroll growth has now outpaced forecasts for 13 consecutive months, an unprecedented streak for a historically mean reverting dataset. The consumer continues to prop up an otherwise slowing economy which was highlighted by the Q1 GDP report released during the month. Earnings season got off to a solid start with over half the companies reporting and earnings declines less negative than analysts expected. This resiliency removes a headwind for the bullish trending market as we move into the summer months amid a cloudy macro environment.

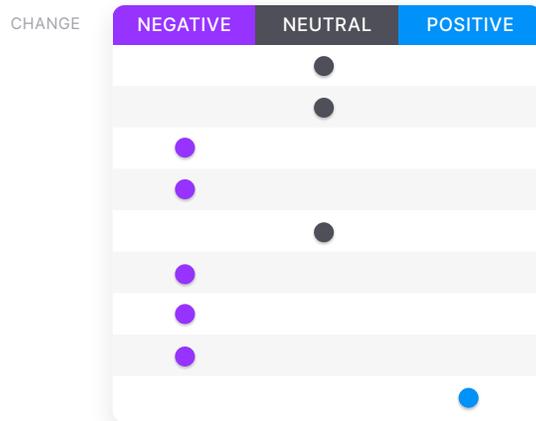

Short-term Factors

(< 6 months)

Market momentum continued in April; 12-month US returns are flat but foreign markets faring better
 Most global equity markets are above upward-sloping moving averages (small cap notable exception)
 Sentiment remains subdued despite strong market YTD; tepid equity flows amid competition for capital
 Sell in May heuristic is overstated but forward 3-month returns in this period only about average

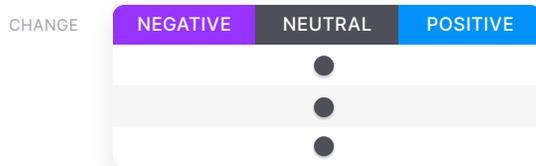

Intermediate-term Factors (6-36 months)

Yellen has stated a June 1st X-date; increasing pressure for a deal to suspend or raise debt ceiling
 Fed hiked rates by an additional 25 bps but messaging opens the door for a pause moving forward
 Inflation continues its moderating trajectory but remains well above Fed's long term target
 Deep yield curve inversion signals growth warning; elevated rate volatility affecting cost of capital
 Global PMIs show contraction; labor market strength continues despite slowdown/recession fears
 Business confidence measures remain subdued as a growth slowdown is expected
 Consumer sentiment is off its lows but remains at depressed levels
 Q1 earnings growth negative but decline not as bad as feared; margin compression stabilized for now
 Spreads widened modestly on banking stress but overall environment remains relatively tame

Long-term Factors

(36+ months)

U.S. equity valuations near long-term averages; overseas markets below average valuations
 Q1 GDP growth positive but well below expectations; consumer spending sustaining economic activity
 Emerging markets possess more favorable trends overall than developed markets

These statements are not guarantees of future performance and actual events may differ materially from those discussed. MSCI AC World ex US Growth: An index made up of approximately the top 50% of the MSCI AC World ex US Index as composite ranked by five growth rates. This is a common proxy used to represent the growth segment of the developed international market. MSCI EAFE Index: A market-capitalized weighted index representing developed international equity markets located in Europe, Australia, Asia and Far East (EAFE). S&P 500 Index: An index consisting of 500 stocks chosen for market size, liquidity and industry grouping, among other factors. The S&P 500 is designed to be a leading indicator of U.S. equities and is meant to reflect the risk/return characteristics of the large-cap universe. Companies included in the Index are selected by the S&P Index Committee, a team of analysts and economists at Standard & Poor's. Barclays US Aggregate Index: A market capitalization-weighted index, maintained by Barclays Capital, and is often used to represent investment grade bonds being traded in the US. MSCI Emerging Markets: a float-adjusted market capitalization index representing 13% of global market capitalization. Captures mid and large cap across more than two dozen emerging market countries.
